Army Intelligence Data Platform ("AIDP")

AIDP is a multi-system, multi-intelligence integration platform

—— Palantir software is deployed as the US Army Intelligence Data Platform ("AIDP") all-source intelligence solution. AIDP provides a critical edge to the warfighter in the era of peer and near-peer conflict.

AIDP is an AC2SP solution that integrates, correlates, and fuses previously siloed data from across the intelligence community into a unified analytic workspace.

OVERVIEW

AIDP is an expanding Program of Record that provides a foundational data architecture, DevSecOps environment, and fully modernized analytic solution based on data integrations from many systems, including:

→ M3   → MAVEN
→ MIDB   → GETS
→ IBS

FEATURES

1. Continuously updating

2. Available on SIPR and JWICS

3. Actively scaling

4. Interoperability with a range of legacy and modernized mission command and intelligence systems
